

# BRANDSAFE

the impact safety specialists

## EV Charging Point Protection

Brandsafe has developed a range of impact protection for EV charging points, which provides comprehensive and cost-effective coverage for valuable assets. We have a wealth of experience providing these protection solutions for global clients, and have seen a recent increase in demand for these systems.

### Light Duty Protection

Ideal for private and small public car parks where domestic vehicles are the primary source of traffic, our standard Light Duty Protection package consists of 2 No. ImpactSAFE Protection Posts that are highly visible to pedestrians and drivers. They provide strong and robust impact protection for this type of application.

### Medium Duty Protection

For industrial and larger public car parks, we provide 2 No. ImpactSAFE Protection Posts and a Wheel Stop for added coverage. We recommend this package as a solution when there is a medium-to-high risk of impact damage and where light industrial vehicles (such as electric vans) are going to be using these charging points.

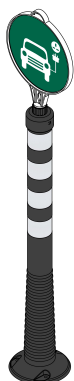

### Heavy Duty Protection

When there are larger industrial vehicles (such as HLGVs and HGVs), we utilise 2 No. ImpactSAFE Bollards and a Wheel Stop. Brandsafe can also offer Armco Safety Barriers as an additional part of this package, the ideal layout of which we can advise on due to our extensive experience with designing and installing these systems.

### Bespoke Solutions

We have the capability and flexibility to create custom solutions to suit the exact requirements of your projects. This can range from non-standard colours to suit clients' branding, to additional signage and protection for surrounding sign / lamp posts, etc. Brandsafe's team of Product Specialists are on-hand to advise you here.
