Pedestrian Safety Barrier (SEG+)

The new generation of polymer handrail, segregators and barriers for today's high end industrial environments. A modular system that defines walkways and segregates forklift traffic from pedestrians. Control the flow of operatives and personnel, while keeping them safely segregated from forklift trucks. Ideal for zoning off LV and IT cabinets to restrict MHE equipment and pedestrian encroachment.

Features and Benefits

- Designed to segregate forklifts from pedestrian routes.
- Comprises of a steel boot, polymer post and polymer rail sets.
- For areas where pallet stacking is adjacent, a low-level barrier can be added.
- Can be cut to length on-site with simple chop-saw cutting process.
- Height - 1100 mm (BS 6180:2011 / EN 1991-1-1 eurocode 1).
- Steel boot bases 100 mm x 100 mm SHS fabrication .
- 180 mm x 180 mm x 10 mm thick baseplates
- All steel work hot dip galvanised to BSENISO 1461.

Material	Polyethylene (HDPE)/steel
Manufactured	UK
Height	1100 mm
Post centres height	1160 mm
Length inbetween post centres	1600 mm
Fixings	4 no. rawl M10 x 105 safety plus anchors
Colour options	Black posts and yellow rail sets galvanised BSENISO 1461/ yellow / black
