

Bollard Cover Kits 960mm High

Uniquely moulded polymer cover kits, push-fit that simply slide over your new/existing steel bollards without the need for repainting. The cover kits are filled with foam to cushion impact and can be used in any areas with 168mm diameter bollards to help decrease the amount of damage when struck, allowing the end-user to replace the kits rather than the bollard itself. 50mm diamond grade reflective bands for improved night visibility and integration of different colourways allows you to choose the ideal style to suit your needs.

Product Features

Unique polymer moulded cover kits that fit over steel bollards up to 168mm diameter

Modular push-fit assembly that slide over old bollards in minutes

Available in vibrant colours - no need for repainting

All diameters can be accommodated with the addition of impact absorbing spacer kits

Technical Details

960mm high

50mm diamond grade reflective bands for improved night visibility

Manufactured in the UK from Polyethylene, UV Stabilised

Product Specification

Material	Medium Density Polymer
Height	960mm High
Outside diameter	210mm
Components	2No. Mids & 1No. Top Cap
Temperature range	-40°C to 90°C
Colours	Green/White (Fire Escape Rooms) Red/White (High Warning Areas) Black/Yellow (Caution Areas) Yellow/Black (Caution Areas) Yellow (Caution Areas) Black (Caution Areas)
